

The Importance of Electricity

Once upon a time lived two brothers. One brother didn't like electricity he thought why we have electricity.

The second brother loved and cared for electricity. The brother asked the second brother what is the importance of electricity? The second brother replied we use electricity for many things like light, iPads, iPhones, computers, etc.

Brother 1- But still I don't get the importance of electricity. Why don't we keep the light on? Where does electricity come from?

We don't leave water running or lights on because it wastes electricity. Without electricity, how are we going to get light? If we just used candles, it would be dim.

If we waste electricity we wouldn't get water in the house. Electricity comes from the power plants. This is how we get electricity.

Solar panels are a source for electricity.

Brother 1- Oh, I didn't know my light is always on and I never close the tap so everything stopped working. I just called the electrician to fix it. He said it will take a month, we have to live in our friend's house.

Brother 2- But the electrician said looking at you everybody did the same thing so we have to live outside for a month for water and light. But everybody's doing it so we are not alone.

Brother 1-How are we going to get light, food, water. The sun gives us light. Berries and fruit are our food and water is from a river.

Days after days passed until one month arrived. At last our house is fixed!

Brother 2- Since you made everyone wait one month you are going to get an electricity quiz. If you pass you don't have to listen to the importance of electricity again. If you don't pass, you have to listen to the importance of electricity.

First question: Where does electricity come from? Ohhh, the sun? Wrong, the power plants.

Second question is keeping the light on, good or bad? Good, right? Wrong, bad.

Last question: Does solar power go for everyone houses? Mmmmm, yes. Wrong, no.

You failed. Let's learn the importance of electricity!! Electricity powers light. Makes the water tank fill, etc. Keeping the light on is bad because you are wasting electricity. Solar panels only go to one house.

So now do you get the importance of electricity?

Brother 1-Yes!!!

So that is the importance of electricity.
